Set up your own, local code-assistant in under 5min

Mozilla.ai

Three-step process

...with millions of options for each of the steps

Step 1: Pick framework to interface your LLM and your IDE

- Continue.dev *(VS / IntelliJ)*
- Tabby *(VS / IntelliJ / vim)*
- ...

Step 2: Pick framework to run local LLMs

- Ollama
- Llamafile (from Mozilla Builders)
- ...

Step 3: Pick your LLM

- **Qwen2.5-coder 7b** *(+8GB (v)RAM)*
- **Deepseek-coder 16b** *(+16GB (v)RAM)*
- **...**

Demo Incoming!

- **Continue.dev in PyCharm**
- **Ollama**
- **LLM**
  - **Qwen2.5-coder-7b for +8GB (v)RAM**
  - **QwQ-32b for +26Gb (v)RAM**
